This Pediatric Directory is published and distributed by the Hydrocephalus Association for the purpose of identifying those neurosurgeons whose primary practice is devoted to pediatrics. The Directory is intended solely as a resource and the physicians listed herein are in no way endorsed, reviewed or recommended by the Association or its members.

Information presented in the Directory has been compiled from questionnaires completed by the physicians. We acknowledge that there are physicians not listed who perform neurosurgical procedures on children; however, it is our intent to focus on those doctors who specialize in pediatric neurosurgery.

Doctors in the US are listed alphabetically by state. Doctors located outside the United States follow, listed by country. Before each doctor’s name we have included an * if they work with adult patients as well as pediatrics.

We are pleased to offer this Directory as a resource for families and professionals. The Hydrocephalus Association strongly believes that the most effective long-term care program for individuals with hydrocephalus depends on the creation of an active health care team. Individuals, families and professionals collaborating in an atmosphere of mutual trust and respect, can ensure that an appropriate, comprehensive, ongoing care plan is in place.

For resources about hydrocephalus, please contact our office at 415-732-7040.

—Board of Directors, Hydrocephalus Association

About the Hydrocephalus Association

The Hydrocephalus Association is a national, 501 (c)(3) nonprofit organization founded in 1983. We strive to provide comprehensive services that empower individuals and families to seek out the best medical care, programs and resources that will meet their needs now and in the future.

As the nation’s most widely respected hydrocephalus support organization, the Association has been instrumental in creating a community of individuals, families and health care professionals addressing the complexities of hydrocephalus in all age groups—infants, children, young adults and adults. We continually update and expand our resources to keep up with new technologies in the diagnosis and treatment of hydrocephalus and stay current with the needs of the individuals we serve.

Hydrocephalus is a chronic condition. However, with early detection, effective treatment and appropriate interventional services, the future for individuals with hydrocephalus is promising. We invite your inquiries.
