Directory of Neurosurgeons and Neurologists for Pediatric Hydrocephalus

This Pediatric Directory is published and distributed by the Hydrocephalus Association for the purpose of identifying those neurosurgeons whose primary practice is devoted to pediatrics. The Directory is intended solely as a resource and the physicians listed herein are in no way endorsed, reviewed or recommended by the Association or its members.

Information presented in the Directory has been compiled from questionnaires completed by the physicians. We acknowledge that there are physicians not listed who perform neurosurgical procedures on children; however, it is our intent to focus on those doctors who specialize in pediatric neurosurgery.

Doctors in the US are listed alphabetically by state, city and by last name. Doctors located outside the United States follow, listed by country, city and last name. Before each doctor’s name we have included an * if they work with adult patients as well as pediatrics.

We are pleased to offer this Directory as a resource for families and professionals. The Hydrocephalus Association strongly believes that the most effective long-term care program for individuals with hydrocephalus depends on the creation of an active health care team. Individuals, families and professionals collaborating in an atmosphere of mutual trust and respect, can ensure that an appropriate, comprehensive, ongoing care plan is in place.

For resources about hydrocephalus, please contact our office at 888.598.3789.

—Hydrocephalus Association

About the Hydrocephalus Association

The Hydrocephalus Association is a national, 501 (c)(3) nonprofit organization founded in 1983. Our mission is to eliminate the challenges of hydrocephalus by stimulating innovative research and providing support, education and advocacy for individuals, families and professionals dealing with hydrocephalus.

As the nation’s most widely respected hydrocephalus support organization, the Association has been instrumental in creating a community of individuals, families and health care professionals addressing the complexities of hydrocephalus in all age groups—infants, children, young adults and adults. We continually update and expand our resources to keep up with new technologies in the diagnosis and treatment of hydrocephalus and stay current with the needs of the individuals we serve.

Hydrocephalus is a chronic condition. However, with early detection, effective treatment and appropriate interventional services, the future for individuals with hydrocephalus is promising. We invite your inquiries.

Neurosurgery and Neurology Explained

People often ask us what the difference is between a neurologist and a neurosurgeon—with all the medical lingo involved; it can be difficult to get a straight answer. While the following sets of frequently asked questions don’t explain all of the details, they do provide a general understanding of neurology and neurosurgery.

Neurosurgeons and neurologists are both medical doctors with specialized training in the diagnosis, treatment and management of neurological disorders. A neurological disorder is an injury to, or disease of, the brain, spine, or peripheral nerves.

<table>
<thead>
<tr>
<th>What is the role of a neurosurgeon?</th>
<th>What is the role of a neurologist?</th>
</tr>
</thead>
<tbody>
<tr>
<td>In addition to diagnosis, a neurosurgeon may provide either surgical or non-surgical care depending on the nature of the injury, illness, or condition. Sometimes a primary care physician who suspects adult hydrocephalus will refer directly to a neurosurgeon, sometimes they will first refer to a neurologist, and then refer on to the neurosurgeon once a diagnosis has been confirmed.</td>
<td>In addition to diagnosis, a neurologist can prescribe medication or recommend surgical treatment, but they do not perform surgery. A primary care physician will often refer a patient to a neurologist for a diagnostic workup before referring to a neurosurgeon. Especially in cases where there are related or concurrent neurological disorders, neurologists can be very helpful.</td>
</tr>
<tr>
<td>In the case of hydrocephalus, the neurosurgeon is the one that performs the shunt implant or ETV surgery.</td>
<td>In the case of adult hydrocephalus, neurologists can be helpful in diagnosis and management. When treatment includes surgery, neurologists may monitor and supervise continuing treatment.</td>
</tr>
<tr>
<td>For patients with externally adjustable or programmable shunt valves, the neurosurgeon may personally perform the fine-tuning adjustments in the months and years after surgery, or they may work with a neurologist who manages this.</td>
<td>For patients with an externally adjustable or programmable shunt valve, a neurologist may be involved in fine-tuning the shunt settings in the months and years after surgery.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>How are neurosurgeons trained?</th>
<th>How are neurologists trained?</th>
</tr>
</thead>
<tbody>
<tr>
<td>After four years of medical school and an internship program, the doctor enters a neurosurgical residency program of five to seven years. While in the program, neurosurgical residents are trained in all aspects of neurosurgery, including cerebrovascular, pediatrics, spine, trauma, and tumor. Some neurosurgeons opt to do an additional fellowship in a particular area of study following their residency.</td>
<td>After four years of medical school and a one-year internship, a neurologist enters three years of specialized training for neurology. Many neurologists also have additional training in one specific area of neurology such as stroke, epilepsy or movement disorders.</td>
</tr>
